

How to tell if your Weatherby SA 08 28 Gauge has been upgraded.

SA-08 28 Gauge Serial Number range: AN00001 - AN02802

If your gun is not within this range of Serial Numbers it did not need to be upgraded and will not have the "W" stamp.

Upon inspection and/or repair by Weatherby or a service center every gun that was affected by the recall will have a stamp on the inside of the receiver, behind the bolt.

BEFORE LOOKING FOR THE MARK MAKE SURE THAT YOU HOLD THE SHOTGUN WITH THE BARREL POINTED IN A SAFE DIRECTION. ENSURE THAT THE CHAMBER IS EMPTY AND BE ABSOLUTELY CERTAIN THAT THE GUN HAS NO ROUNDS STORED IN THE MAGAZINE. ENSURE THAT THE SAFETY IS ENGAGED. FAILURE TO COMPLY WITH THESE INSTRUCTIONS COULD RESULT IN SERIOUS INJURY OR DEATH.

To view the mark:

1. With the barrel fully removed, pull the bolt back (the mark should be visible with the bolt fully engaged in either direction).
2. Look to the back of the receiver in good lighting.
3. The "W" should be stamped on the back of the receiver as seen in the pictures below.
4. The "W" indicates that the gun has been upgraded.
